

Quick start guide

This guide relates to the following stylesheets:

Product: OS VectorMap® Local

Data format: GML

Stylesheet format: QGIS stylesheets (QML)

The stylesheets have been designed to work with the data as it is supplied

- 1 Either fork the stylesheets on [GitHub](#) or [download](#) them and navigate to the directory that matches your data format, stylesheet format and style preference.
- 2 Copy the font file 'OS_VMLocal.otf' into your systems font directory (on Windows machines this is C:\Windows\Fonts).
- 3 Copy the folder 'ordnance_survey' into your QGIS SVG directory (a typical Windows file path is C:\Program Files\QGIS xxxx\apps\qgis\svg, where xxxx represents whatever version of QGIS you are running).

Your machine may require a restart for QGIS to recognise the new font and SVGs.

- 4 Load your OS VectorMap Local data into QGIS.
- 5 Double-click on a layer to access the 'Layer Properties' window > click on 'Load Style...' > navigate to the directory containing the QML files (those ending .qml) > select the QML file that corresponds to that layer > click 'Open' > click 'OK'.

Repeat step 5 for all layers.

6 Although every feature is styled, for use as a contextual map we recommend the following layer order and visibility:

We recommend viewing the map between 1:2 500 and 1:10 000 for maximum legibility.

Your map should now look similar to this:

Compatibility notes

Symbol orientation (rotation) has been written as an expression and will only work in QGIS v2.2 or later.

Our QML files are compatible with any QGIS v2.x.
